julens trender

Att julens färg är svart har vi kunnat se ett tag nu och i år kommer trenden att nå ut till de breda massorna, det är vi övertygade om. Vi kommer dessutom att få se mer dekorativa inslag, helt nya material och kombinationer.

Det blir mer silver och guld, mer glitter, men även en del isiga inslag. Tomten och ängeln här intill är ett par exempel. De är upplysta med LED-lampor som drar mindre energi än andra lampor.

Christmas trends

It has been clear for some time that black is the colour this Christmas, and we are convinced that this trend will gain widespread popularity this year. We expect to see more decorative elements, entirely new materials, and entirely new combinations of materials. There will be more silver and gold, more glitter, as well as touches of ice. Santa and the angel alongside are two examples. They are illuminated with LED lights that use less energy than other light sources.

Energy saving!
LED

NEW

NEW

Den svarta julbelysningen får gärna ha inslag av vitt, silver eller guld. Helst ska färgerna vara högblanka. Det märks inte minst på pappstjärnorna som fortsätter att vara populära. Helst ska de vara dekorerade med sömmar, nitar och sammetsdetaljer.

Black Christmas lighting should preferably contain elements of white, silver or gold. High-gloss colours are ideal. This is particularly evident in the ever-popular paper Advent stars. To be just right these should be decorated with stitches, studs and velvet details.

För pappstjärnorna finns förutom svart, även basfärgerna grått, rött och vitt. Om man sneglar mot fönsterkarmen kommer man att se mer stilrena ljusstakar i aluminium, glas och trä. Även här är det högblanka färger i svart och vitt som gäller. Valnöt verkar också vara på intågande.

In addition to black, the paper stars come in base colours grey, red and white. A glance at window sills reveals more stylish candelabras made of aluminum, glass and wood. Shiny colours in black and white are popular. And walnut appears to be making its debut as an alternative material.

De dekorativa inslagen blir fler och fler. Spetstyget dök först upp i klämodet och nu på senare tid har vi kunnat se det i heminredningen. I år är det första gången som spets förknippas med vårt julfirande, i alla fall på det här sättet. I svart eller vitt, kombinerat med silver.

Decorative elements are multiplying. Lace textiles which first appeared in women's fashion have recently started popping up in home furnishings. This year is the first time that lace is associated with our Christmas celebrations, at least in this way. In black or white, combined with silver.

Welcome to Markslöjd...

A photograph of a room with a white door, a window with a brick wall view, and a dark wooden chair. The scene is dimly lit, with light coming from the window. The door is on the left, and the window is on the right. A dark wooden chair is in the foreground on the right. A potted plant is on the windowsill. The text "julstjärnor" is written in white and "christmas stars" in yellow below it.

A photograph of a window sill. In the center, a potted ivy plant with green leaves and a thin vine trailing upwards sits on a stack of three red books. To the right, a white ceramic bowl is filled with several oranges and apples. The window behind the plants shows a view of a brick building. The lighting is soft and natural, coming from the window. The text 'ljusstakar' is overlaid in white, with 'candle sticks' in a smaller, italicized font below it.

chrisline &
utomhuslingor
chrisline & outdoor light chains

Koppla ihop din trädgård med lysdioder/LED

Det extremt energisnåla alternativet som sparar både pengar och miljö! Riktigt varmt vita lampor där 100 ljuskällor endast förbrukar 8W. Dioderna håller upp till 50 000 timmar och slingorna är självklart utbyggbara ihop med hela det övriga **Chrissline** systemet. Koppla ihop 100 m ljusslinga – ex. 10 st ljusslingor á 100 st lampor – totalt får du då 1000 ljuskällor i ett och samma system!!!!

Väljer du Chrissline Garden - kan du koppla ihop 15 armaturer/100 m kabel (max 2200 W) i ett och samma system. För att inte riskera överbelastning – följ dessa instruktioner.

Vi har ljuset. Du har fantasin. Tänk vad lite ljus kan göra.

Connect your garden with Light-emitting diodes LED

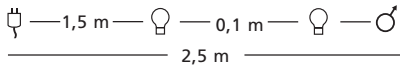

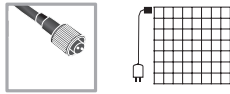

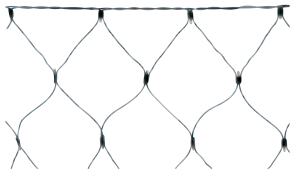

The extremely energy saving alternative which saves money and protects the environment!

Really warm white lamps where 100 lights use only 8W. The diodes last up to 50 000 hours and the light chains can, of course, be integrated with the rest of the **Chrissline** system. Connect a 100 m long light chain – e.g. 10 light chains at 100 bulbs each – in total you will have 1000 lights in one system!!!

If you choose the **Chrissline Garden**, you can connect 15 armatures/100 m cable (maximum 2200W) in one. To avoid overcharging the system, please follow these instructions.

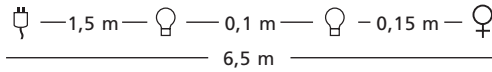

We have the light. You have the imagination. Amazing what a little light can do.
